VIVID
Optics by ZEISS

Vivid Technology Eliminates Flat Light

The Science Of Vivid

In partnership with ZEISS®, we created our patented VIVID technology to optimize vision in all snow-affected light environments. VIVID technology does this by blocking out the spectrum of light that creates flat light conditions. More importantly, VIVID allows in the spectrum of light that improves contrast in snow conditions—the blue light part of the spectrum. This is the VIVID difference. The result is maximum contrast to see the details of your terrain, while also providing full UV protection.

Optimized Lens Tints

Giro offers a full assortment of performance-engineered polycarbonate lenses in a wide range of lens tints to enhance your vision in conditions ranging from bluebird to dark and stormy. Every lens filters 100% of harmful UV, and features durable coatings that resist fogging and scratches. Select lens tints include flash mirror coatings that tune light transmission for optimal vision.

GOGGLE TECH INDEX

VIVID TECHNOLOGY WITH OPTICS BY ZEISS®

VIVID is a patented lens technology—developed by Giro in partnership with ZEISS® Optics—that improves the visual experience on snow by enhancing contrast and definition. VIVID reduces eyestrain, improves reaction time, boosts confidence, and delivers precise vision without color over saturation. VIVID Lens Technology effectively manipulates blue light by letting in contrast enhancing blue light, while blocking harmful UV light. VIVID essentially filters out the haze and frees your eyes to spot your line and focus on enjoying your riding experience.

TORIC VIVID LENSES WITH OPTICS BY ZEISS®

Toric in shape, this injection-molded lens mimics the form of the human eye to provide superior optics while creating increased air volume inside the goggle to help prevent fogging. Manufacturing, testing, and quality control of all Giro toric lenses is performed by ZEISS® Optics and are held to the highest standard.

CYLINDRICAL VIVID LENSES WITH OPTICS BY ZEISS®

Manufacturing, testing and quality control of all premium injection-molded cylindrical lenses performed by ZEISS® Optics, ensure optics of the highest standard. Additionally, these lenses are injection-molded, further refining optics and minimizing distortion that can occur in thermoformed cylindrical lenses. Our full range of performance-engineered lens tints and mirror coatings help to enhance vision and every lens is protected by a durable, scratch-resistant coating.

EXPANSION VIEW TECHNOLOGY +

Giro set the standard when we introduced the first EXV (Expanded View) goggle. Now we're excited to introduce the next breakthrough with EXV+, which features a proprietary, semi-spherical lens curvature that allows a wider field of view than ever before.

EXPANSION VIEW TECHNOLOGY

Developed and perfected at the DOME, our R&D center in Santa Cruz, California, Giro's groundbreaking Expansion View Technology (EXV) is a new frame design that creates an unparalleled field of view. We started with a helmet-compatible goggle design and then eliminated and tapered material from the frame and engineered frameless zones to optimize a massive spherical lens and yield maximum peripheral vision in our goggles.

INJECTION MOLDED CYLINDRICAL LENSES

Injection molding a cylindrical lens helps refine optics and minimize distortion that can occur in thermo-formed cylindrical lenses. Our full range of performance-engineered lens tints and mirror coatings help to enhance vision and every lens is protected by a durable, scratch-resistant coating.

SNAPSHOT - MAGNETIC INTER-CHANGE LENS SYSTEM

Our Snapshot Lens Interchange System utilizes self-locating rare earth magnets and a secure locking mechanism for fast, on-the-fly (or on the chairlift) virtually effortless lens interchange. Upon contact with the frame, the lens simply snaps into place and then locks down securely. When the clouds roll in simply depress the shutter button, release the lens and insert the lens of your choice.

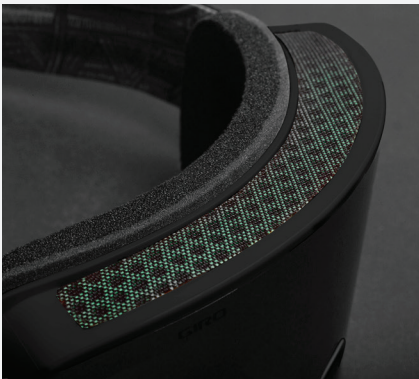

QUICK CHANGE LENS SYSTEM

This elegant lens interchange system uses self-locating magnets to assist in lightning-fast lens replacement and keep the lens securely locked in place.

SLASH SEAL

The Slash Seal lens interchange system is an easy and intuitive interface for swapping out lenses on-the-go. Simply align the lens carrier, new lens, and press the frame and lens together along the perimeter seam to seal the deal.

EVAK VENT TECHNOLOGY

Found exclusively on all premium Giro goggles, EVAK Vent Technology uses a foam made from an ultra-durable, non-absorbent material. EVAK vents minimize the chance of fogging by releasing moisture while simultaneously creating a barrier from the elements.

SEAMLESS COMPATIBILITY

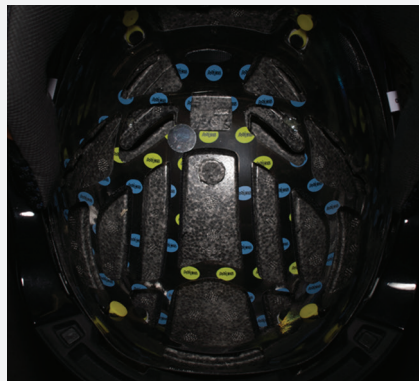

For optimal performance of both helmets and goggles, Giro products are designed to work together, ensuring a seamless interface between helmet and goggles for an exceptional fit and dependable, worry-free function.

HELMET TECH INDEX

SPHERICAL TECHNOLOGY™

Spherical Technology, powered by Mips®, is a refinement and evolution of the Multi-Directional Impact Protection System (Mips). With this sophisticated design, two layers of foam fit together like a ball-and-socket. This system helps protect the brain from rotational energy by allowing up to 10- to 15-millimeters of relative motion between the helmet and head during the first milliseconds of an impact.

MIPS EQUIPPED

Mips® can provide more protection in certain impacts. The main components of a Mips-equipped helmet are the interior foam liner, the low friction liner, and an elastomeric attachment system. In an angled impact, the elastomeric attachment system stretches to allow the foam liner to rotate independently around your head.

CONFORM FIT TECHNOLOGY

The fully integrated Conform Fit System utilizes a two-piece shell that literally forms to the rider's head shape by expanding and contracting with the turn of a dial. A truly adaptive design, it features a durable yet semi-flexible EPP construction that provides the lowest-profile fit we've ever created and unsurpassed custom comfort.

HYBRID CONSTRUCTION

Hybrid Construction merges a durable ventilated Hard Shell upper with an In-Mold construction lower shell plus sidewalls for added protection and style. With Hybrid Construction the helmet is beefed up for added durability while remaining lightweight. Hybrid Construction also features an impact absorbing and lightweight EPS foam liner.

D² CONSTRUCTION

D2 Construction pairs two densities of Expanded Polypropylene (EPP) foam to manage both high- and low-energy impacts. Additionally, EPP offers impressive resilience—this crushable foam regains its shape and retains some of its protective qualities after multiple impacts.

IN-MOLD CONSTRUCTION

In-Mold Construction fuses a tough polycarbonate outer shell with the helmet's impact-absorbing foam liner. The fusion process allows for better ventilation systems, making In-Mold helmets lighter and cooler than traditional helmets.

HARD SHELL CONSTRUCTION

Hard Shell Construction produces great helmets at a great value. A rugged outer shell is molded and then attached to the EPS foam liner.

IN FORM 2 FIT SYSTEM

The In Form 2 System is lighter and lower profile than the original, making it even easier to dial in a custom fit in seconds—even with gloves on. The updated On-The-Fly Vertical Tuning feature accommodates different goggles and head shapes for a custom fit free of gaper gap.

PASSIVE AGGRESSIVE VENTING SYSTEM

The discrete exterior vent design and interior channeling (including the liner and padding) combine to create optimal airflow and temperature regulation. This auto-venting technology manages airflow and temperature-motion riding, hiking, or standing static.

THERMOSTAT CONTROL™

Thermostat Control Adjustable Venting control allows you to custom tune airflow instantly with a simple, low profile control button on the outside of the helmet. No other system is faster or easier to adjust, and nothing is more effective at keeping you comfortable.

STACK VENT

Our Stack Vent was developed based on research showing the majority of the warm air that can cause fogging exhausts from the center top vent of the goggle. Aligning the Stack Vent in the helmet with the vent of your goggles helps to keep them clear and fog free.

FIDLOCK®

FIDLOCK® MAGNETIC BUCKLE CLOSURE

The pinch-free, one-handed Fidlock® Magnetic Snap helmet buckle combines the advantages of two fastening concepts in a completely new way. Strong magnets make it easy to open and close, while a secure snap functionality ensures a continuous locking force.
